

Flour Milling Grinding Crusher

This grinding crusher is designed for primary processing of agricultural products, specifically for flour milling. The design allows for efficient grinding and crushing of grains and other agricultural materials for flour production.

Product Overview

Efficient Flour Milling Solution

This grinding crusher is specifically engineered for the primary processing of agricultural products, making it an ideal tool for efficient flour milling. The unit features a robust cylindrical body design with a dedicated hopper for consistent material feeding. It is built for reliable performance in agricultural settings, ensuring effective grinding and crushing of grains for high-quality flour production.

Technical Specifications

Primary Application	Flour Milling
Processed Materials	Grains, Agricultural Products

Design & Build

Color Configuration

Yellow Hopper • Green Body

Operational Features

- Integrated base switch
- Cylindrical grinding chamber
- Top-feed hopper design
