

Flue Exhaust Gas Water Heater for Residential Use

This flue exhaust gas water heater provides efficient and reliable hot water. It features a wall-mountable design with a flue for venting exhaust gases, a digital display, and safety features.

Product Overview

Residential Flue Exhaust Gas Water Heater

This flue exhaust gas water heater is engineered for efficient and reliable on-demand hot water supply in residential settings. Featuring a compact, wall-mountable design, it ensures safety and convenience through advanced integrated sensors and a user-friendly digital interface. The unit is built with high-quality components like a copper water valve and large burner row to provide consistent performance.

Key Components

Core Components

- Copper water valve
- Double ignition pin
- Big solenoid valve
- Large burner row

Safety & Control

Control Features

- LED display for temperature monitoring
- Summer-winter switch
- Zero water pressure start

Safety Protections

Overvoltage Protection, Over Water Pressure Protection, Overheating Protection, Down-draught Protection, Flameout Protection, Frozen Protection, Flue-blocked Sensor
