

Flue Gas Desulfurization System for Sintering Machines

This system removes sulfur dioxide and other pollutants from flue gas. It is designed for use with 83 m² sintering machines.

Overview

Industrial Flue Gas Desulfurization

This advanced flue gas desulfurization system is engineered specifically for sintering machine operations. It effectively captures and removes sulfur dioxide and other harmful pollutants from industrial flue gas streams. By integrating this solution, facilities can ensure compliance with environmental air quality standards while maintaining the efficiency of the sintering process.

Technical Specifications

Compatible Sintering Machine Area	83 m ²
Application Scope	Sintering Machines, Flue Gas Treatment, Environmental Control
Primary Function	Sulfur dioxide removal and pollutant capture
