

Fluid Extraction and Transfer Hand Pump

This hand pump is designed for extracting and transferring fluids in automotive maintenance. Its manual operation ensures portability and independence from power sources, making it suitable for various fluids like engine oil, transmission fluid, coolant, or brake fluid.

Product Overview

Professional Fluid Handling Solution

This manual fluid extraction and transfer pump is a versatile tool designed for efficient automotive maintenance. Engineered for portability, it operates independently of power sources, allowing for use in various service environments. It is ideal for extracting and transferring engine oil, transmission fluid, coolant, or brake fluid with precision.

Technical Specifications

Design Features

- Long dip tube for deep reservoir reach
- Clear transfer hose included
- Portable, non-powered design

Compatible Fluids

Engine Oil, Transmission Fluid, Coolant, Brake Fluid

Operation Type

Manual Hand-Operated
