

# Fluid System Pressure Control Device with Gauge

This pressure control device regulates and maintains pressure in various fluid systems. It features a robust construction with a red and black housing, incorporating a pressure gauge for visual monitoring of pressure levels.

## Product Overview

### Professional Fluid Pressure Control

This high-quality pressure control device is engineered for precision regulation and consistent maintenance of pressure within industrial fluid systems. Featuring a robust, durable housing with an integrated pressure gauge, it allows for immediate visual monitoring of system performance. Designed for versatile integration, the unit includes multiple ports for fluid connectivity and a dedicated electrical enclosure for seamless power and control configuration.

## Technical Specifications

Design & Build	Robust Housing, Fluid System Compatible, Integrated Gauge, Electrical Integration
Color Configuration	Red and Black

## Functional Features

Monitoring	Yes
