

Fluid Tank Caps and Filler Necks

These caps and filler necks are essential for closing and accessing industrial fluid tanks. They are compatible with fuel, hydraulic, and radiator systems.

Product Overview

Industrial Fluid Containment Solutions

This comprehensive line of industrial caps and filler necks is designed for versatile application across fuel, hydraulic, and radiator water tank systems. Engineered for precision fitment, the collection accommodates various filler neck diameters to ensure secure fluid containment. These components are essential for heavy-duty machinery, automotive, and general industrial fluid transfer applications.

Technical Specifications

Material Composition

- Steel
- Aluminum
- Brass

Surface Finishes

Raw Metal • Polished • Coated

Suitable Applications

Fuel Systems, Hydraulic Systems, Radiator Water Tanks, Industrial Machinery, Automotive

Size Range

Multiple sizes available to fit all standard filler neck diameters
