

Fluorescent Lamp Electronic Ballast

This electronic ballast is designed for fluorescent lamps, ensuring efficient and reliable operation. It features a compact design, energy-saving performance and compatibility with various lamp types.

Overview

High-Efficiency Electronic Ballast

This electronic ballast is engineered to provide reliable, efficient operation for fluorescent lighting systems. Designed for both industrial and commercial environments, it ensures stable light output while contributing to energy savings. Its compact, durable construction supports extended lamp life and consistent performance across various lighting applications.

Technical Specifications

Key Features

- Energy-saving performance
- Compact design
- Stable light output
- Extended lamp life

Certification

DOM

Model Number

JY18SA

Application

Industrial, Commercial
