

# Fluororubber Heat Shrink Tubing

This heat shrink tubing is made of Viton fluororubber. It is high temperature and oil resistant.

## Product Overview

### Fluororubber Heat Shrink Tubing

This high-performance fluororubber heat shrink tubing is designed for demanding environments, maintaining flexibility and structural integrity across a wide temperature range. It provides reliable insulation and protection for wires, connections, and terminals. With a 2:1 shrink ratio, it conforms tightly to the underlying object when heated, ensuring robust environmental protection.

## Technical Specifications

### Operating Temperature Range

|                        |                        |
|------------------------|------------------------|
| <b>-55</b><br>Min Temp | <b>260</b><br>Max Temp |
|------------------------|------------------------|

|                    |     |
|--------------------|-----|
| Shrink Ratio       | 2:1 |
| Shrink Temperature | 175 |

## Performance Features

|                     |  |
|---------------------|--|
| Key Characteristics | High Temperature Resistance, Flexible, Crack Resistant, Environmental Protection |
