

Folding Rivets

Folding rivets are designed for creating strong and reliable joints in various materials. During installation, the slotted end folds to create a secure fastening, suitable for applications with limited access.

Product Overview

Folding Rivets Overview

Folding rivets are specialized fasteners designed for creating strong, reliable joints across various materials. Featuring a cylindrical body with a pre-formed head and a hollow, slotted end, they are engineered for applications where access is limited to a single side of the assembly. During installation, the slotted end expands and folds to create a secure, flush, and clean finish.

Technical Details

Mechanism	Mandrel-driven folding expansion
Access Type	Single-sided access

Material & Finish

Material	Metal
----------	-------

Application Features

Key Benefits

- Strong and reliable joints
- Flush, clean finish
- Ease of installation
- Suitable for limited access areas
