

Food and Beverage Processing Machinery Component

This open-frame machinery component is designed for food and beverage processing. Constructed from light-colored wood, it features a grid-like structure with mesh-covered openings for sifting or filtering.

Product Overview

Industrial Processing Component

This sturdy, open-frame machinery component is specifically engineered for food, beverage, and cereal processing environments. Featuring a grid-like structure with integrated fine mesh screens, it is designed for efficient sifting, filtering, or material support. Its design prioritizes hygiene and seamless integration into larger industrial processing systems.

Technical Specifications

Construction Material	Light-colored wood
Design Features	Open-frame, Grid structure, Integrated mesh screen, Industrial grade

Applications

Primary Use Cases

- Food processing
- Beverage production
- Cereal processing
- Sifting and filtering operations
