

Food and Grain Processing Machine

This industrial machine is designed for processing food, beverages, and cereal grains. It is used for cleaning, separating, or sorting grains or other food products.

Overview

Industrial Grain Processing Solution

This industrial-grade machinery is engineered for efficient food, beverage, and cereal grain processing. Built with a robust frame and a high-capacity hopper, it is designed to handle demanding industrial-scale production environments. The system integrates a powerful electric motor to ensure consistent performance during cleaning, separating, or sorting operations.

Technical Specifications

Key Operational Capabilities

- Grain Cleaning
- Material Separation
- Product Sorting

Construction Build

Robust Frame • Industrial-Scale Design

Primary Application

Food Processing, Beverage Production, Cereal Grain Processing

Drive System

Electric Motor
