

Food Processing Centrifuge

This high-performance food processing centrifuge is designed for efficient separation of solids and liquids in various food production applications. Constructed from durable stainless steel, it ensures hygienic operation and easy cleaning.

Overview

High-Performance Separation Technology

The HLP-20 is a high-performance food processing centrifuge designed for efficient separation of solids and liquids in various food production applications. Constructed from durable stainless steel, it ensures hygienic operation and easy cleaning. The centrifuge features a user-friendly control panel for precise adjustment of speed and processing time, making it ideal for food processing plants, research facilities, and quality control laboratories.

Technical Specifications

Key Features

- Efficient solid-liquid separation
- Hygienic design
- Precise control panel
- Robust motor

Operational Capabilities

20 HLP

Model Series

Material Construction

Stainless Steel

Ideal Applications

Food Processing, Research Facilities, Quality Control
