

Forced Air Kerosene Heater

This portable forced air heater is designed for spot climate control in industrial and commercial settings. It features a high-output burner for rapid heating and durable steel construction for long-lasting performance.

Product Overview

Industrial Forced Air Kerosene Heater

This high-output forced air heater is specifically engineered for professional spot climate control in demanding industrial and commercial environments. Built with robust steel construction, it provides reliable performance on construction sites, garages, and large workshops. Integrated safety mechanisms including flame-out detection and overheat protection ensure secure operation during extended use.

Performance

Fuel Source	Kerosene
Core Features	Forced Air, High-Output Burner, Durable Steel Construction, Integrated Fuel Tank

Safety

Safety Systems

- Overheat protection
- Flame-out detection

Usage

Applications

- Construction sites
- Industrial warehouses
- Commercial workshops
- Garages
