Overview

Professional Forestry Mulcher Teeth

These high-performance forestry mulcher teeth are engineered for demanding land clearing and vegetation management operations. Constructed with premium carbide tips and robust 42CrMo or 40Cr steel bodies, they deliver exceptional wear resistance and durability. Designed for optimal cutting performance, these tools help reduce downtime and ensure efficiency in professional forestry applications.

Technical Specifications

Material Composition

- Carbide tips
- 42CrMo steel body
- 40Cr steel body

Heat Treatment Hardness

42.5 HRC

Manufacturing Processes

Hot Forging, Cold Forging, Heat Treatment

Customization

Customization

Yes

Customization Details

We provide customized mulcher teeth that meet your exact needs.
