

Forged Aluminum Motorcycle Wheels

These forged motorcycle wheels feature a lightweight design with intricate spoke patterns for optimized strength and reduced rotational inertia. Precision machining ensures accurate fitment and smooth operation.

Product Overview

High-Performance Forged Aluminum Wheels

These forged motorcycle wheels are engineered from high-grade 6060 T6 aluminum alloy using advanced CNC machining processes. Designed to push the limits of quality and value, they offer superior longevity and refined workmanship for professional riders. Each wheel undergoes rigorous in-house testing to meet stringent TUV standards, ensuring safety and reliability on the road or track.

Material & Construction

Material	6060 T6 Forged Aluminum Alloy
Manufacturing Method	CNC Machining

Quality & Compliance

Compliance	TUV Certified, In-house Tested
------------	--------------------------------

Performance Features

Performance Benefits

- Optimized strength-to-weight ratio
- Reduced rotational inertia
- Enhanced handling and responsiveness
- Improved acceleration

Key Advantages

Lightweight Design • Corrosion Resistant • Superior Longevity
