

Forged Forklift Axle

This forged forklift axle is engineered for durability and optimal performance. It is suitable for heavy-duty material handling applications.

Overview

Forged Forklift Components

These precision-engineered forged components are designed for heavy-duty material handling applications, offering exceptional durability and wear resistance. Manufactured using advanced forging and CNC machining techniques, these parts ensure optimal performance and reliability under demanding operational conditions. The range includes essential forklift components such as axles, gears, and shafts, built to meet rigorous quality standards.

Manufacturing Capabilities

Machining Size Range

1200 mm

Max Diameter

6000 mm

Max Length

100 mm

Min Diameter

20 mm

Min Thickness

Material Compatibility

Carbon Steel, Stainless Steel, High-Speed Steel, Die Steel, High-Temperature Alloy Steel, Copper, Aluminum, Low-Carbon Alloy

Annual Production Capacity

7000 tons

Quality & Compliance

Quality Certifications

GB16949

Product Range

Available Components

- Forged Gears
- Wheels
- Shafts
- Turbines
- Forged Cylinders
- Piston rods
- Flanges
- Couplings
- Sleeves
- Forged Sprocket
- Planet carrier
- Pulley
- Forged vessel components
- Bearing base
