

Forged Metal Discs and Plates

These forged metal discs and plates are made from carbon steel, stainless steel, and alloy steel. They are suitable for use in heat exchangers, pressure vessels, and other critical components.

Product Overview

Industrial Forged Discs and Plates

These high-quality forged metal discs and plates are engineered for demanding industrial applications, including heat exchangers, pressure vessels, and heavy machinery components. Manufactured using precision forging techniques, they offer superior structural integrity, durability, and dimensional accuracy. Our components are available in a wide range of material standards and dimensions to meet the specific requirements of critical engineering projects.

Technical Specifications

Material Composition	Carbon Steel, Stainless Steel, Alloy Steel
Material Standards	GB, ASTM, ASME, AISI, API, DIN, UNI, BS

Dimensions

Outer Diameter Range	3000 mm
Height Range	800 mm

Manufacturing & Quality

Delivery Condition	Rough Machining • Finish Machining
Quality Assurance	Yes
Customization	Customer designs welcomed
