

Forged Steel Connecting Rod for Automotive Engines

This forged steel connecting rod is designed for high-performance automotive engines. Its precision-machined bearing surfaces ensure an optimal crankshaft and piston pin interface.

Product Overview

High-Performance Engineering

This forged steel connecting rod is engineered specifically for high-performance automotive engines. It features precision-machined bearing surfaces designed to ensure a seamless interface with both the crankshaft and piston pin. Built for durability and reliability, this component facilitates efficient power transmission even under extreme operating conditions, meeting or exceeding OEM standards.

Technical Specifications

Quality Compliance

OEM Specification • High-Performance

Key Design Features

- Forged steel construction
- Precision-machined bearing surfaces
- Optimized for crankshaft interface
- Optimized for piston pin interface

Material	Forged Steel
Application	Automotive Engines
Part Reference	583
