

Forged Steel Wrecking Bar

This wrecking bar is suitable for prying, demolition, and general leverage applications. It has a flattened end for easy insertion and a curved end for increased leverage.

Product Overview

Professional Grade Wrecking Bar

This forged steel wrecking bar is a versatile heavy-duty hand tool engineered for demanding prying, demolition, and leverage tasks. Featuring a durable construction that resists wear and corrosion, it is designed to withstand high-stress environments. The dual-end design includes a flattened end for precision insertion and a curved end for maximum leverage, making it an essential implement for dismantling structures and professional site maintenance.

Technical Specifications

Key Features

- Forged steel construction
- Flattened insertion end
- Curved leverage end
- Corrosion-resistant finish

Material	Forged Steel
Surface Coating	Corrosion-resistant protective coating

Applications

Use Cases	Demolition, Prying, Nail Removal, Structure Dismantling
