

Forging Construction Project Phase One

This construction project involves establishing a new forging facility. It represents the initial phase of development for forging operations.

Project Overview

Phase One Construction Overview

This document outlines the first phase of a large-scale forging facility construction project. The site is designed to accommodate heavy industrial operations, featuring substantial steel frame structures and specialized infrastructure. The development is situated within an industrial zone, emphasizing capacity for heavy machinery and large-scale industrial output.

Current Status

In Construction • Phase One

Technical Infrastructure

Primary Infrastructure

- Steel frame structure
- Industrial chimney
- Scaffolding assembly
- Industrial site development
