

Fork Terminal Busbar

This electrical busbar is designed for distributing power within an electrical system. It features multiple copper fork terminals for secure connections.

Product Overview

High-Conductivity Fork Terminal Busbar

This electrical busbar is designed for efficient power distribution within control panels, switchboards, and power distribution units. Featuring a robust, insulated housing and high-conductivity copper construction, it ensures reliable and secure connections for multiple circuits. The silver-plated finish provides enhanced corrosion resistance and optimal electrical performance, making it a dependable solution for demanding industrial applications.

Technical Specifications

Safety Features

Insulated Housing • Corrosion Resistant

Terminal Type	Fork Terminal
Material	Copper, Silver-plated

Applications

Typical Applications

- Electrical Panels
- Distribution Boards
- Control Panels
- Switchboards
- Power Distribution Units
