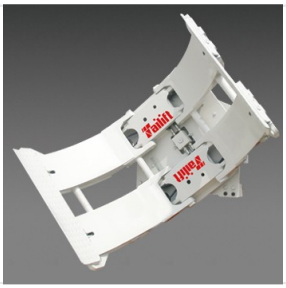
Forklift Roll Clamp Attachment

The roll clamp is a specialized attachment for forklifts and other material handling equipment designed for gripping and transporting cylindrical objects. It features two opposing arms that close around the roll, providing a secure hold without damaging the surface.



Product Overview

Industrial Handling Precision

This hydraulic roll clamp attachment is engineered for the efficient and secure handling of cylindrical materials, including paper rolls, steel coils, and concrete pipes. Featuring 360-degree rotation and adjustable hydraulic gripping force, it ensures precise positioning while protecting cargo integrity. Built with robust steel and protective pads, it is a versatile solution for warehousing, printing, and manufacturing environments.

Technical Specifications

Operation Type	Hydraulic
Rotation Range	360 degrees
Features	Hydraulic Control, 360-degree Rotation, Replaceable Rubber Pads, Robust Steel Construction

Application

Suitable Materials

- Paper rolls
- Steel coils
- Concrete pipes

Target Industries

Warehousing • Printing • Manufacturing
