

Formaldehyde Removing Air Purifier

This air purifier is designed for removing formaldehyde and other harmful pollutants from the air. It utilizes a multi-stage filtration system with pre-filter, HEPA filter, and activated carbon filter.

Product Overview

High-Efficiency Air Purification Solution

This advanced formaldehyde-removing air purifier utilizes an aero-fan system to effectively pull air through a high-efficiency HEPA filter, capturing 99.97% of airborne dust and pollutants. Designed for professional-grade performance, it features quiet operation and energy-efficient architecture, making it ideal for spaces up to 15 square meters. The unit also includes convenient scheduling options and negative oxygen ion release to improve indoor air quality.

Performance Metrics

Purification Capacity

170 m³/h

CADR Rating
