

Forward Plate Compactor with Protective Frame

This forward plate compactor is designed for soil and asphalt compaction tasks. It features a heavy-duty steel base plate and protective frame for durability.

Overview

Robust Compaction Performance

This forward plate compactor is engineered for high-efficiency soil and asphalt compaction, making it an essential tool for construction, landscaping, and road maintenance projects. Built with a heavy-duty steel base plate and a protective frame, it offers the durability required for demanding job sites. Its powerful engine ensures consistent, reliable performance to meet professional compaction standards.

Technical Specifications

Noise Level

104 dB

Sound Power Level

Key Features

- Heavy-duty steel base plate
- Protective frame for engine safety
- Forward travel design
- High-efficiency compaction

Typical Applications

Soil Compaction, Asphalt Compaction, Construction, Landscaping, Road Maintenance
