

# Foundation Piling Machine

The PH-5 series piling machine is designed for foundation reinforcement in various construction projects. It is also suitable for reinforcing railway and highway roadbeds, as well as port and dock construction.

## ADDITIONAL IMAGES

## Overview

### Robust Foundation Solution

The PH-5 Series Piling Machine is a versatile and heavy-duty construction solution engineered for deep foundation work and infrastructure development. Designed for precision and stability, it features a modular lattice structure that ensures accurate pile placement even in demanding soil conditions. This equipment is essential for large-scale engineering projects, offering reliable performance for bridge construction and foundation piling.

## Technical Specifications

### Key Features

- High-capacity piling hammer
- Adjustable piling depth
- Modular design for transport and assembly
- Wheeled base for site mobility
- Sturdy lattice frame structure

### Performance Metrics

**5 PH**

Series Designation

## Operational Capabilities

### Design Advantages

High Stability • Precise Operation • Easy Maneuverability • Versatile Pile Compatibility

### Application Suitability

Foundation Work, Bridge Construction, Deep Foundation, Infrastructure Development, Foreign Engineering Contracting
