Fountain Water Pump for European Use

This high-performance fountain pump is designed for reliable water circulation in fountains, ponds, and water features to European standards. Its compact design allows easy installation and integration into various fountain setups for consistent performance.

Product Overview

High-Performance Fountain Pump

This fountain pump is engineered specifically for European standards, offering reliable and efficient water circulation for various water features. Its robust construction ensures durability and a long service life, making it suitable for both indoor and outdoor applications. The compact design facilitates easy installation, while its optimal flow rates and head pressure help create captivating water displays.

Technical Specifications

Key Features

- European standard compatibility
- Compact design
- Robust construction
- High-performance circulation

Model Identifier	HQB-03
Usage Environment	Indoor, Outdoor
