

Four-Column Hydraulic Press

This four-column hydraulic press is suitable for molding hardware and medals. It offers high precision, fast speed, and adjustable pressure for various metal forming applications.

Overview

High-Efficiency Hydraulic Molding

The Four-Column Fast Hydraulic Press is a versatile machine engineered for precision molding and forming applications. It is ideal for industries processing hardware, medals, jewelry, and plastic components. With industrial PLC control and integrated safety features, it delivers high efficiency and consistent performance for demanding production environments.

Applications

Suitable Materials & Products

Hardware, Medals, Glasses, Grinding Wheels, Gold Ornaments, Metal Signs, Watch Bands, Plastic, Rubber

Technical Performance

Operational Features

- High efficiency and low energy consumption
- High precision operation
- Fast processing speed
- Automatic counting function
- Adjustable pressure via pressure relay

Control System

Industrial microcomputer PLC control

Safety & Compliance

Safety Equipment

Infrared safety protection • Electric eye sensor
