

Four-Column Hydraulic Press

The four-column hydraulic press is a versatile metal forming machine designed for various applications. Its robust structure ensures stability and precision during pressing operations.

Product Overview

Professional Metal Forming Solution

The YL32G series four-column hydraulic press is a high-performance machine engineered for stability and precision in industrial metal forming tasks. Featuring a rigid four-column architecture, it ensures consistent force delivery and structural integrity during operation. This versatile equipment supports a wide array of applications including stamping, deep drawing, bending, and punching to meet diverse manufacturing needs.

Key Features

Primary Applications

- Stamping
- Deep Drawing
- Bending
- Punching

Certifications & Standards

Industrial Standard, Safety Compliant

Safety & Control

Operator Protection

Emergency Stop • Safety Guards

System Precision

Adjustable pressure settings for customized material processing
