

Four-Column Metal Finening Machine

This four-column metal finening machine is an advanced precision shaping machine. It delivers high-precision surface finishing and stereo shape creation during blanking processes.

Product Overview

Advanced Precision Shaping

The Four-column Rapid Finening Machine is an advanced precision shaping solution designed for high-quality blanking processes. It delivers exceptional surface finish and stereo shape accuracy, making it an ideal choice for the automobile, home appliance, and electronics industries. Engineered for efficiency, this machine combines low power consumption with high-performance output to meet demanding production requirements.

Technical Performance

Adjustment Error	0.02 mm
Control System	Closed loop control system for fast, accurate positioning
Hydraulic Features	Advanced pressure and flow ratio control for higher reliability, low power consumption, and low noise

Operational Features

Operation Modes	Inching, Semiautomatic, Automatic
Safety	Yes

Industry Applications

Suitable Industries

Automobile • Home Appliances • Electronics
