

# Four-Conductor Audio Cable

This audio cable contains four conductors with color-coded insulation. It has a white outer jacket and exposed copper conductors.

## Overview

### High-Definition Audio Connectivity

This four-conductor audio cable is engineered for reliable, high-definition signal transmission in professional audio environments. Featuring stranded bare copper conductors and a durable PVC jacket, it provides the flexibility and protection required for demanding installations. With options for shielding and core counts, this cable is a versatile solution for clear, interference-free sound distribution.

## Construction

### Shielding

Shielded • Unshielded

|                     |                      |
|---------------------|----------------------|
| Conductor Material  | Stranded bare copper |
| AWG Range           | 12-18 AWG            |
| Insulation Material | PVC                  |
| Core Configuration  | 2 Cores, 4 Cores     |
| Jacket Material     | PVC                  |
| Additional Features | Rip Cord included    |

## Electrical Characteristics

### Key Electrical Metrics

**1000 V**

Voltage Test

**500 M $\Omega$ m**

Min. Insulation Resistance

**57.5 nF/km**

Max. Mutual Capacitance
