

Four-Cylinder Diesel Engine

This four-cylinder diesel engine is engineered for power generation and industrial machinery. It features direct fuel injection for efficient combustion and reduced emissions.

Overview

Robust Industrial Power Solution

The ZH4102P3 is a reliable four-cylinder diesel engine engineered for high-performance power generation and industrial applications. It features a direct injection fuel system designed for efficient combustion and lower emissions while maintaining a durable, long-service construction. This unit is built for professional environments where ease of maintenance and consistent power output are critical.

Performance Metrics

Engine Specifications

40 HP Min Power Output	60 HP Max Power Output	4 L Displacement
----------------------------------	----------------------------------	----------------------------

Technical Specifications

Governed Speed	1500-1800 RPM
Lubrication System	Forced lubrication
Fuel System	Direct Injection, Mechanical Governor
Air Intake	Oil bath air cleaner

Maintenance

Key Maintenance Benefits

- Ease of maintenance
- High serviceability
- Cost-effective power solution
