

Four-Cylinder Diesel Engine for Power Generation

The R4105ZT3 is a robust diesel engine designed for applications within the Electric Power sector, specifically in Transmission & Distribution systems. This engine features a four-cylinder configuration, providing reliable power and efficient fuel consumption.

Overview

Industrial Power Solution

The R4105ZT3 is a robust four-cylinder diesel engine specifically engineered for reliable power generation in electric power, transmission, and distribution systems. It integrates advanced combustion technology to achieve a balance between high-performance output and efficient fuel consumption. Built with a rugged construction and an optimized cooling system, this engine ensures consistent operation and long-term durability in demanding industrial environments.

Technical Specifications

Engine Configuration	4-Cylinder
Fuel Injection System	High-pressure

Features

Key Features

- Optimized cooling system
- Advanced combustion technology
- Rugged industrial construction
- High-pressure fuel injection

Applications

Primary Applications	Power Generation, Generator Sets, Transmission & Distribution Systems
----------------------	---
