

Four-Cylinder Diesel Engine for Power Generation

This robust diesel engine is designed for applications within the electric power transmission and distribution sector. It features a four-cylinder configuration, providing a balance of power and efficiency.

Overview

High-Performance Four-Cylinder Diesel Engine

The R4105AZG is a robust four-cylinder diesel engine engineered specifically for reliable electric power transmission and distribution applications. Designed for consistency and thermal efficiency, it incorporates a comprehensive cooling system and advanced filtration to ensure operational longevity in generator sets. This unit provides an ideal balance of power output and fuel reliability for demanding power generation environments.

Technical Specifications

Engine Configuration	4-Cylinder
Cooling Mechanism	Integrated Cooling Fan

Maintenance & Reliability

Filtration Components

- Fuel filtration system
- Fuel filter
- Oil filter

Application

Primary Applications	Power Generation, Generator Sets, Electric Power Transmission
----------------------	---
