

Four-Cylinder Diesel Engine R4105C8

The R4105C8 is a robust diesel engine designed for various industrial applications. It features a four-cylinder configuration, offering a balance of power and efficiency.

Overview

Robust Industrial Power

The R4105C8 is a high-performance four-cylinder diesel engine engineered for versatility across industrial, agricultural, and power generation applications. Featuring an optimized direct injection system, it delivers a superior balance of raw power and fuel efficiency. Designed for longevity, its heavy-duty construction includes advanced cooling and lubrication systems to ensure reliable operation in the most demanding work environments.

Technical Specifications

Engine Configuration	4-Cylinder Inline
Cooling System	Water-cooled
Fuel System	Direct Injection

Key Features

Suitable Applications

- Power Generators
- Construction Machinery
- Agricultural Equipment

Performance Advantages

Fuel Economy, Heavy-Duty Construction, Optimized Combustion, Extended Service Life
