

Four-Cylinder Diesel Engine with Radiator Cooling

This robust diesel engine is designed for various industrial applications. It features a four-cylinder configuration and a radiator cooling system for optimal performance.

Overview

Robust Industrial Power Solution

The K4100D is a robust diesel engine designed for various industrial applications. It features a four-cylinder configuration, providing a balance of power and efficiency. The engine is equipped with a radiator cooling system to maintain optimal operating temperatures, ensuring reliable performance under varying load conditions.

Technical Specifications

Cylinder Configuration	4
Cooling System	Radiator Cooling
Fuel Injection System	Mechanical

Applications

Primary Applications	Generators, Water Pumps, Heavy-duty Equipment
----------------------	---

Design Features

Design Advantages

- Durability
- Ease of maintenance
- Cost-effective operation
