

Four-Cylinder Internal Combustion Engine

This is a used four-cylinder engine with a multi-valve cylinder head and intake manifold. It appears to be equipped with electronic fuel injection.

Overview

Four-Cylinder Internal Combustion Engine

This four-cylinder internal combustion engine is designed for vehicle replacement or parts salvage applications. Featuring a robust multi-valve cylinder head and an integrated electronic fuel injection system, it offers reliable performance for automotive repair and maintenance projects. The unit is built with a twin-cam 16-valve configuration, ensuring efficient air intake and combustion processes.

Technical Specifications

Cylinder Count	4
Valve Configuration	16 Valve
Camshaft Type	Twin Cam
Fuel System	Electronic Fuel Injection
