

Four-Pronged Claw Nut for Woodworking

This four-pronged nut is designed for insertion into wood or composite materials. The prongs dig into the material to prevent rotation when the fastener is tightened.

Product Overview

Four-Pronged Claw Nut

The four-pronged claw nut is an essential fastener designed specifically for woodworking and composite material projects. By creating a secure, threaded socket, it allows for reliable bolt or screw attachment. The integrated prongs bite into the substrate to prevent rotation during tightening, making it ideal for robust furniture assembly and industrial woodworking.

Technical Details

Fastener Design

Four-Pronged • Rotation-Resistant

Product Category

T-Nut

Available Finishes

Bright Zinc Plated, Self-Colour, Yellow Zinc Plated, Hot Dipped Galvanized
