

# Four-Stroke Gasoline Engine for Power Generation

This gasoline engine is designed for power generation. It is a four-stroke engine commonly used in small generators, water pumps, and other portable power equipment.

## ADDITIONAL IMAGES

## Product Overview

### High-Performance Four-Stroke Engine

This robust four-stroke gasoline engine is engineered for reliable power generation across a wide range of demanding applications. Featuring an efficient Overhead Valve (OHV) system and durable cooling fins, it ensures consistent performance and effective heat dissipation. Designed for ease of maintenance and long-lasting operation, this engine serves as a dependable power source for portable equipment.

## Technical Specifications

Engine Type	Four-Stroke Gasoline Engine
Valve System	OHV (Overhead Valve)
Starting Mechanism	Recoil Starter
Cooling System	Air-cooled (via integrated cooling fins)

## Applications

Ideal Applications	Generators, Water Pumps, Portable Power Equipment
--------------------	---

## Design Features

### Construction Highlights

- Durable engine block construction
- Efficient combustion system
- Integrated air filter housing
- Easy-access maintenance components
