

# Four-Stroke Gasoline Engine

This is a four-stroke, two-valve engine designed for use in small vehicles such as scooters or mopeds. The engine appears to be air-cooled and features a silver-colored crankcase.

## Overview

### Four-Stroke Gasoline Engine

This high-performance four-stroke, two-valve gasoline engine is designed for reliability and consistent power delivery. Engineered with an air-cooled system featuring prominent cooling fins, it ensures optimal thermal management during operation. Its compact design and integrated electrical components make it a versatile choice for small vehicle applications.

## Technical Specifications

Engine Configuration	Four-stroke, two-valve
Cooling System	Air-cooled
Fuel Type	Gasoline

## Features

Key Design Features	Air-cooled, Two-valve system, Integrated electrical components, Compact design
