

Four-Way Fire Hose Coupling

This four-way fire hose coupling splits a single water source into multiple outlets for firefighting. It is made for secure hose connections and durability under pressure, commonly used in industrial, commercial, and municipal firefighting.

Product Overview

Professional Four-Way Fire Hose Coupling

This four-way fire hose coupling is engineered to split a single water source into multiple outlets, significantly enhancing the efficiency and reach of firefighting operations. Constructed from robust brass or bronze, it is built to withstand high-pressure environments while maintaining a compact, deployable design. It serves as an essential tool for industrial, commercial, and municipal firefighting, ensuring secure and reliable hose connections.

Technical Specifications

Material

Brass • Bronze

Configuration

Four-way split

Connection Type

Threaded inlets and outlets

Applications

Primary Applications

- Industrial firefighting
- Commercial firefighting
- Municipal firefighting
