Overview

High-Performance Motor Start Capacitor

This four-wire start capacitor is engineered to provide the essential initial surge of energy required to start electric motors efficiently. Designed for durability and reliable performance, it is a critical component for household appliances, particularly washing machines and dryers. Its robust construction ensures consistent operation across demanding start cycles.

Technical Specifications

Wiring	4-wire configuration
Wire Colors	White, Yellow, Red, Grey
Form Factor	Cylindrical

Application

Common Applications

- Washing Machines
- Dryers
- Electric Motor Starting Systems

Design & Construction

Casing Options

Black Casing • Metallic Silver Finish
