

Frame Hydraulic Press

The frame hydraulic press is a robust industrial machine designed for pressing and forming applications. Its rigid frame ensures stability and precision during operation.

Overview

Professional Industrial Pressing Solution

The Y34 series frame hydraulic press is a robust and versatile machine engineered for high-precision industrial forming and stamping tasks. It features a compact, rigid frame construction that ensures exceptional stability and reliability during complex operations. Designed with both jog and semi-automatic modes, it maximizes productivity while maintaining low energy consumption for cost-effective manufacturing.

Key Features

Operational Advantages

- High productivity output
- Low energy consumption
- Fast cylinder system
- Flexible and reliable movement
- Safe and convenient operation

Work Modes

Jog Operation, Semi-Automatic

Technical Capabilities

Compatible Industries

- Hardware manufacturing
- Electrical appliances
- Watch straps
- Grinding wheels
- Plastic molding
- Rubber processing
- Embossing
- Complex mode correction

Semi-Automatic Cycle

Step Order	Action
1	Uplink
2	Compression
3	Auto return trip
4	Return trip stop
