

Framing Square with Metric and Imperial Graduations

This precision-engineered framing square is designed for accurate measurements in both metric and imperial units. Constructed from high-grade metal, it features clearly marked graduations for easy reading and precise marking.

Overview

Precision Framing Square

This framing square is a precision-engineered tool designed for accurate measurements in both metric and imperial units. Constructed from high-quality hardened steel, it ensures durability and long-term reliability for demanding professional environments. The black surface finish provides high contrast for the etched markings, ensuring excellent visibility during layout and marking tasks.

Technical Specifications

Material	Hardened Steel
Finish	Black Etched
Measurement Systems	Metric, Imperial

Features

Key Features

- Dual-scale graduations for versatility
- High-contrast markings for visibility
- Durable construction for long life
- Precision right-angle design

Applications

Suitable Applications

Woodworking • Construction • Metalworking • Layout • Framing
