

Freezer Copper Fitting Assembly

This copper fitting assembly is designed for use in refrigeration systems of freezers. It facilitates branching or joining of copper pipes within the refrigeration circuit, ensuring optimal thermal conductivity.

Overview

Precision Freezer Copper Fitting Assembly

This high-quality copper fitting assembly is engineered specifically for freezer and refrigeration applications. Designed to facilitate complex refrigerant line routing, it features multiple brazed connections, capillary tubes, and integrated service ports. Built for durability and thermal efficiency, this component ensures reliable performance in demanding cooling systems.

Technical Specifications

Key Components

- Capillary tubes
- Service ports
- Vibration isolator section
- Multiple brazed connections

Material

High-quality Copper

Primary Application

Freezer Systems, Refrigeration Circuits

Performance Characteristics

Benefits

Corrosion Resistant • Optimal Thermal Conductivity
