

FT/FN Distribution Box

This distribution box is designed for FT/FN applications. It is typically used to house and protect electrical components and distribute power or signals.

Product Overview

Versatile FT/FN Distribution Solutions

The FT/FN Distribution Box is engineered to provide a secure and organized housing for critical electrical components such as circuit breakers, fuses, and terminal blocks. It ensures the reliable distribution of power or signals across various circuits while maintaining high safety standards for electrical or telecommunications systems. This robust enclosure is designed to protect internal wiring and connections, making it an essential component for professional infrastructure management.

Key Features

Primary Functions

- Housing and protection of circuit breakers and fuses
- Secure terminal block management
- Organized power and signal distribution
- Enhanced wiring safety and reliability

Technical Specifications

Designation Standard

FT • FN

Application Scope

Electrical Systems, Telecommunications, Power Distribution

Safety & Compliance

Safety Features

Provides a secure environment to protect wiring and ensure system reliability.
