

Fuel Dispensing Pump

This gasoline and gas pump dispenses fuel. Its robust construction features multiple ports and connection points, making it part of a larger fuel delivery system.

Product Overview

High-Performance Fuel Dispensing Pump

This robust fuel dispensing pump is engineered for reliable and precise fuel transfer in industrial and commercial applications. Constructed from durable metal, likely cast iron or steel, it is designed to withstand the rigors of continuous operation within fuel delivery systems. Its positive displacement design ensures accurate fuel metering, making it an essential component for efficient fuel management.

Technical Specifications

Application Compatibility

Gasoline • Fuel Delivery Systems • Industrial Use

Design Features

- Robust metal construction
- Multiple connection ports
- Integrated fuel line fittings
- Positive displacement metering

Pump Mechanism

Positive Displacement Pump

Construction Material

Cast Iron, Steel, Metal
