

Fuel Injection Pump Element

This pump element is designed for fuel injection systems in automotive engines. It provides precise fuel delivery for optimal engine performance.

Overview

Precision Fuel Injection Component

This fuel injection pump element is a critical component designed for automotive engine applications, ensuring reliable fuel delivery and optimal engine performance. It features a precision-engineered spring and plunger mechanism built to withstand the high-pressure and high-temperature conditions of an engine environment. This durable part is compatible with a range of part numbers, making it a versatile choice for engine maintenance and repair.

Identification

Component Type

Fuel Injection Pump Element • Commonrail

Compatible Part Numbers

4P9827, 7W0561, 7W5928, 1086634

Technical Details

Construction Features

- Precision-engineered spring mechanism
- Durable plunger construction
- High-pressure resistance
- High-temperature tolerance
