

Fuel Injection Pump for 4BA1 Engine

This fuel injection pump is designed for the Isuzu 4BA1 engine. It ensures efficient combustion and reduced emissions.

Product Overview

High-Precision Fuel Injection Component

This plunger-type fuel pump is engineered for optimal fuel delivery and efficient combustion in 4BA1 engines. Constructed from high-speed steel (Gcr15), the component is designed to withstand temperature variations and resist corrosion, ensuring reliable performance and a long service life. Precision-machined to exacting standards, it provides consistent fuel pressure to support smooth engine operation.

Technical Specifications

Model Number	131151-6920
Stamping ID	A85
Engine Compatibility	4BA1
Diameter	12 mm
Material	Gcr15 (High-speed steel)
Fuel System Type	Diesel
Stroke Type	4 Stroke

Features & Benefits

Key Advantages

- Long lasting service life
- Resistant to temperature variations
- Resistance to corrosion
- High performance and smooth functionality

Certifications

ISO 9001
