

Fuel Injection Pump for Diesel Engines

This high-pressure fuel injection pump is designed for heavy-duty diesel engines. It features robust construction and precise fuel metering for optimized performance in demanding applications.

Product Overview

High-Performance Diesel Fuel Injection

The PW2000 is a high-pressure fuel injection pump engineered for heavy-duty diesel engines in demanding industrial environments. Featuring a multi-plunger configuration and high-grade alloy housing, it provides reliable and consistent fuel delivery under harsh operating conditions. Its precision-machined components and compact design ensure efficient performance, minimal leakage, and easy integration into complex hydraulic systems.

Technical Specifications

Model	PW2000
Pump Configuration	Multi-plunger
Material Composition	High-grade alloy, Corrosion-resistant

Key Features

Operational Capabilities

- Precise fuel metering
- Responsive output adjustment
- High efficiency and minimal leakage
- Versatile integration via multiple ports

Application Suitability

Best For

Heavy machinery • Industrial processing equipment • Heavy-duty diesel engines
