

Fuel Injection Pump

This high-performance fuel injection pump is designed for internal combustion engines. It features a maximum displacement of 1.0 liters per cylinder and a maximum output power of 30KW per cylinder, while complying with Euro 2 emission standards.

Product Overview

High-Performance Fuel Injection Solution

This fuel injection pump is engineered for demanding internal combustion engine applications, offering robust durability and precise fluid delivery. Designed to optimize engine efficiency and power output, it ensures reliable operation in challenging industrial environments. The unit features a compact yet powerful design, making it an ideal choice for machinery requiring consistent and efficient fuel management.
